

Project: Laundry Services Web App

Problem Statement : Design and implement a web application for a laundry service that allows users to explore services, book appointments, and receive email confirmations. The application should have a user-friendly interface with a navigation bar, hero section, service details, and a booking system.

Problem Description : The objective is to create a web application for a laundry service that streamlines the user experience. Users should be able to navigate through different sections, explore available services, add items to the cart, and book appointments seamlessly. Additionally, the application should send an email to your email address providing the details of the order placed by the user using email.js when the user clicks on Book Now.

Revitalize Your Clothes with Expert Laundry Services!

From premium dry cleaning to swift wash and fold, we deliver care and convenience. Schedule a pickup and rediscover the freshness of your clothes today!

 Book a service today!

Our Achievements

15+
Laundry Services

240+
Happy Customers

2+ Yrs
Experience

Tasks :

Navbar:

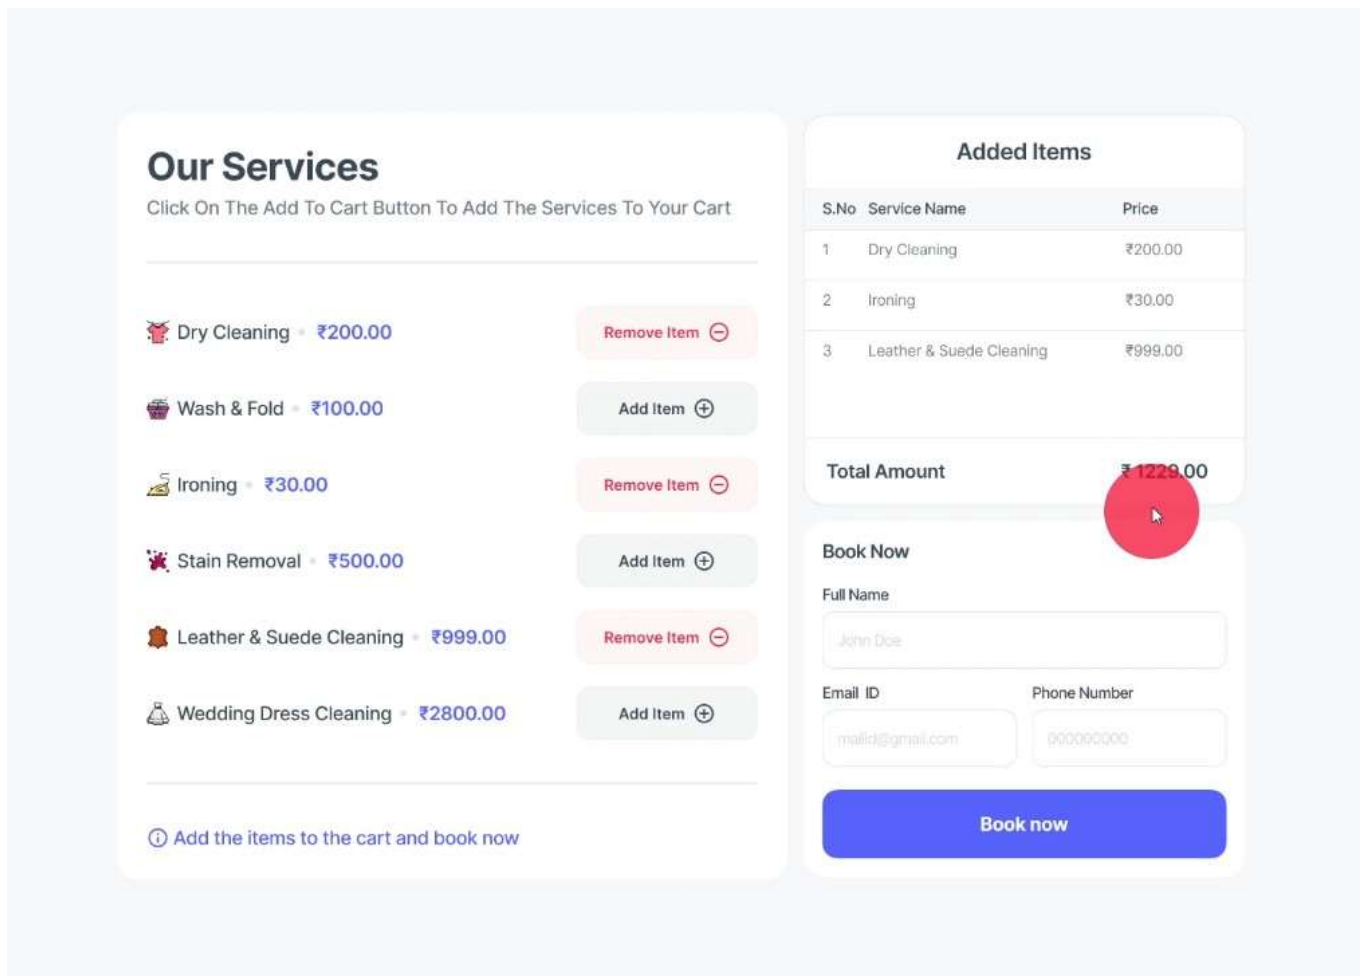

- Design a responsive navigation bar with the following sections: Home, Services, About Us, Contact Us.
- Include a logo on the left and the user's name on the right.

Hero Section:

- Create a hero section with two divs.
- Left div : Heading, description, and a "Book a Service Today" button. When a user clicks on the button it should scroll to the booking services section.
- Right div : Display an image related to the services.

Service Overview Section:

- Design a section outside the main div with full width and some height.
- Display the service achievements: 15+ laundry services, 240+ happy customers, 2+ years of experience.

Booking Services Section:

Divide the section into left and right divs.

Right Div :

- First div : Initially display no added items. Update dynamically as the user adds services from the right section.
- Bottom of the first div : Display the total amount, initially set to 0.
- Second div: "Book Now" heading with input fields for full name, email, and phone number.
- "Book Now" button at the bottom of the second div.

Left Div :

- Display services with the list of services, name, and price.
- Include "Remove Now" and "Add Items" buttons for the services.
- At the bottom, add info to "Add items to the cart".

Email Confirmation:

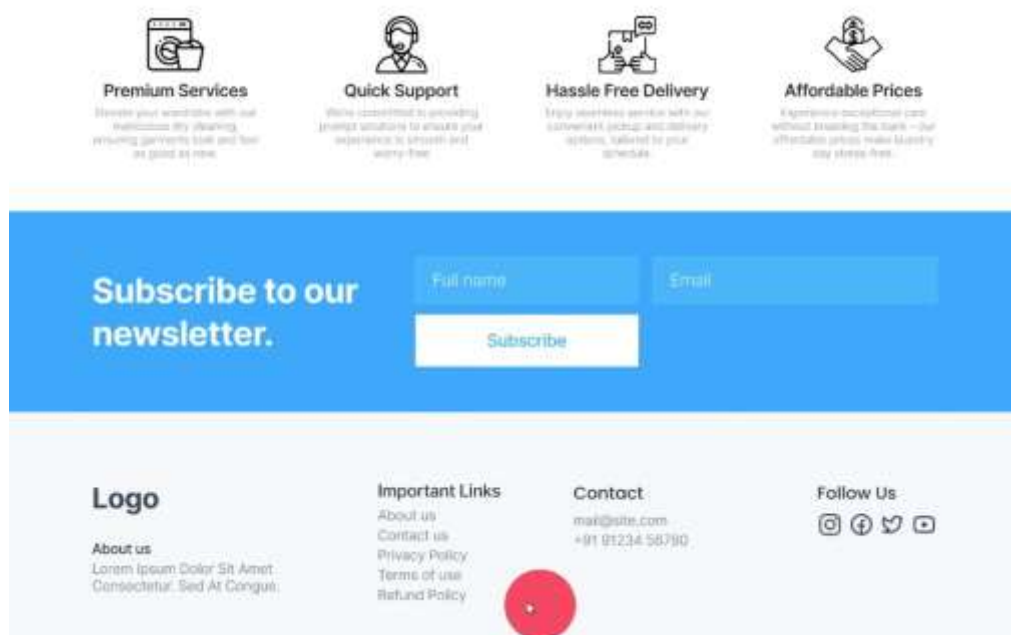

- Implement email.js to send a confirmation email when the user clicks the "Book Now" button.
- Display a message below the button "Thank you For Booking the Service We will get back to you soon!".

Quality Description Section:

- The Quality Description Section aims to communicate the unique selling points and distinguishing features of the laundry services offered.
- This div serves as a platform to highlight the qualities that set the service apart from competitors.
- The mentioned qualities, including premium services, quick support, timely delivery, and affordable prices.
- Users can quickly grasp the key attributes that make this service a preferred choice.

Newsletter Subscription Section :

- The Newsletter Subscription Section is designed to engage users and foster a continuous connection with the audience.
- By incorporating input fields for the user's full name and email, the section allows users to willingly subscribe to the service's newsletter.
- The "Subscribe" button acts as a call-to-action, inviting users to stay informed about the latest updates, promotions, and news related to the laundry service.
- This section is essential for building a community and keeping users actively involved with the brand.

Footer :

- The Footer serves as the concluding element of the web application, offering users essential links and additional ways to connect with the service. It typically includes:
- Logo : Reinforces brand identity and provides a visual anchor for users.
- About Us Link : Navigates users to a page detailing the background, mission, and values of the laundry service.
- Important Links : Provides quick access to crucial pages such as FAQs, Terms of Service, or any other pertinent information.
- Contact Us Link : Allows users to easily reach out for inquiries, feedback, or support.
- Social Media Icons: Facilitate social engagement by providing links to the service's social media profiles, encouraging users to follow and stay connected.
- The Footer is strategically placed at the bottom of the webpage, ensuring users have easy access to vital information and avenues for further interaction.
- It serves as a navigational aid and a means to enhance user experience even as they conclude their visit to the web application.

Submission Guidelines

1. Name the file "index.html" and deploy The Code on Netlify.
2. If you don't know how to deploy on Netlify, watch this video: <https://youtu.be/qAcOhFdC0-k?si=EpXM-FWbu3VTy4f9>
3. Deploy Link: Submit Deploy Link in Submission box.

Additional Resources

- For any queries, doubts or deploy related, connect with your mentor using the chat support option or 1:1 mentorship.

Good luck with your project! Remember to be creative and apply everything you've learned so far.
